Providing Potable water in HARINAGARAM Village

Supported by
LongReach Foundation

Thanks to **Ms. Audra Wood, LongReach Foundation** and **Fresh Water Friends Inc., USA** for transferring the money required for drilling a borewell in the other most needy village Harinagaram.

Harinagaram is small village with a chenchu gudem (where the tribal communities live) with about 755 population living in 155 households. During our pre-project visit we have noticed that the population fetch water from the nearby farm fields and use it for drinking water purpose.

Sanction of the project submitted by Chaitanya Kala Bharathi, and subsequent release of required funding has helped to initiate the activity in this village.

On 8th February, 2024 CKB started the work of drilling a bore at Harinagaram Chenchu Colony. This Gudem sarpanch Mr. Nagamuni and Sachivalayam Secretary Mr Siva Krishna were present on this occasion. The drilling work started, and at a depth of 260 feet the water level was touched, however, the drilling continued upto 380 ft to ensure that the bore doesn't dry up during the summer season. A 2.5-inch water was touched at this depth.

Pursuant to this, the later stage of activities got initiated – i.e., construction of platform, fitting up of submersible motor with a water PVC plastic pipe of 360 ft length, installation of Water tank of the capacity of 2000 litres etc. Followed by this the carved stone about the donors was also fixed to the Platform.

With this the work got completed and the communities in the Gudem are drawing water from this established unit. They have requested CKB to convey their heartfelt gratitude for this kindness.

Chaitanya Kala Bharathi has requested Fresh Water Friends, USA to extend financial support to install borewells to providing potable water to 3 villages in Nandyal District of Andhra Pradesh. As a part of this, CKB has already completed the digging of a borewell and installation of a cistern in Sirivella Village during the month of December 2023.
