PREAMBLE

WATER – THE ELIXIR OF LIFE

NAYANI CHERUVU CHENCHU GUEDEM is a small tribal settlement where there are 48 families belonging to Chenchu communities. The total population of the colony is around 212.

The major problem of this Chenchu Gudem is that they are away from the main village, and deviated from the main Road. They do not have proper transportation and other basic facilities including potable water for the families in the Chenchu Gudem.

THE PROPOSAL

A team of **Chaitanya Kala Bharathi**, has visited Nayani Cheruvu Chenchu Gudem as a part of its field visit in this area to identify any problems to the communities which are making them to suffer in their day to day life.

The major problem our team has noticed was that there is an acute drinking water problem in this Chenchu Gudem. Being the basic need of the communities, they are suffering a lot, as they have to fetch water from a distant water canal, the water of which is the only source during the non-summer season.

However, there is a great suffering for the communities during summer when the canal dries up and there will be hardly any water. During that time, they have to go to the distant agricultural fields to fetch a pot of water when the owners of the farmers come and kick on their irrigation motors.

Moreover, the water they carry is not clean and pure, as it is mixed with mud and other such impure particles, as this water is used for various purposes like cattle, bathing by the passer-by farmers, washing clothes etc.

Having noted down this issue, CHAITANYA KALA BHARATHI, has submitted a project proposal to KIREA requesting them to sanction grant-in-aid for digging a bore well and fitting it with handpump for the extraction of water.

KIREA was kind enough to sanction the project with a positive approach, and released an amount of Rs.90,000/- for this programme.

THE IMPLEMENTATION

On 19th August 2022, CKB initiated the work of digging bore well in Nayani Cheruvu Chenchu Gudem. The organization has contacted a reputed and experienced bore drilling agency in Nandyal town and assigned the work of digging the borewell.

The work started in the presence of the villagers, with the women performing the tradition Pooja before initiating the work.

The project was a success as the water level was touched at 240 ft, to the delight of everyone in the Chenchu Gudem. The water was very pure and tasty too, and the yield was very good.

At this point the digging was stopped, and a casing pipe to a depth of 60 ft was inserted to assure that there is no slipping or closure of bore due to any natural accidents etc.

After the digging of the borewell, the handpump set was installed and fixed on the bore so that the villagers can draw water manually. At the same time a platform was also constructed with provision for the run-off water.

THE INAUGURATION

The entire facility was inaugurated on 26th August, 2022 in the presence of the villagers, who have expressed their utmost happiness for this asset their village has got with the support of KIREA and in coordination with Chaitanya Kalabharathi.

In the words of Ms. Parvathi, the “Accredited Social Health Activist” (ASHA), who is supporting the communities in this village with regard to their health and hygiene aspects, “it is a project that has given us the relief from the acute water problem the Chenchu Gudem was facing. Thanks to Rasalbhai Mohammadali Kapasi, and Rakanbai Jivajee Kapasi, from KIREA, Canada and CKB for coming to our support and helping us to relieve of the suffering for water, especially during the summer period.

DETAILS OF EXPENDITURE FOR THE PROJECT

Sl. No.	Details		Expenditure incurred
1	Cost of drilling the bore	240 ft x Rs.115	27,600
2	Cost of Casing Pipe	60 ft x Rs.400	24,000
3	Cost of cement, bricks, sand, stone chips etc.		6,800
4	Purchase of hand-pump set, GI Pipes, Plunger Rods, Head etc.		31,000
5	Transportation charges		3,200
6	Cost of plaque stone, banner and posters etc.		3,500
7	Supervision of the work, Labour charges for the construction of platform		8,500
	Total expenditure		104,600
	Grant Received from KIREA, Canada		90,000
	Contributions from different sources		14,600
