

Providing Potable water in Sirivella Village

Supported by Fresh Water Friends Inc., USA

Chaitanya Kala Bharathi has requested Fresh Water Friends, USA to extend financial support to install borewells to providing potable water to 3 villages in Nandyal District of Andhra Pradesh.

Thanks to them and Ms. Audra Wood who have accepted the request and extended the financial support to start the work in one of the village as the initiative.

Soon after the receipt of the first phase of funds, we have initiated all the necessary steps to take up the implementation of the project of digging bore in Sirivella village on 6th December 2023. Yes, it took us a few days to take all the permissions to dig a bore in the village, after which the work was started and has been successfully completed.

At the initial stage the water level was touched at a depth of 240ft. However, keeping in view the practical reality that water layer at this level is not an assured one during the summer seasons, the bore has been dug to a depth of 350 fts., to ensure that water will be available round the year. It is noticed that 2 inches of water is now available from this bore. As of now -

- ✓ We have completed the digging of bore in the village Sirivella.
- ✓ The platform for the installation of the tank has also been constructed.
- ✓ Three days after the completion of the platform construction, the installation of submersible pump and fixing of storage tank was taken up.
- ✓ The work was completed in full shape, with the fixing of cistern to the storage tank so that the communities can fetch water from the tank.

The people are now drawing water from this established unit, and are happy to extend their heartfelt gratitude to the sponsors for their generous support.
